

Instruction for parents, custodians and people working in the facility according to Section 34 (5) sentence 2 Infection Protection Act (IfSG)

In order to prevent infection, the distance and hygiene rules must be observed very strictly. If you or your child are suffering from coronavirus disease or have SARS-CoV-2 symptoms (especially dry cough, fever, shortness of breath), there is no access allowed for the facility.

We urgently ask you to take the advice of your family doctor or pediatrician with these symptoms.

If people working in the facility or children respectively pupils need to stay at home or even need treatment in the hospital, please inform us immediately. Tell us the diagnosis so that we can take all necessary measures together with the health department preventing the spread of the infectious disease.

Your treating doctor or the responsible health department will tell you whether your child is allowed to attend school or other community facilities or not.
